Continuation of 11. does NOT place the application in condition for allowance because: Applicant in essence argues, on bottom of page 10 to top of page 11 of the remarks, that the there is no measurement based on the coordinates that are obtained in the radiation image. Examiner disagrees. As shown in the last office action the coordinates that are set give the dimensions of the rectangle, i.e geometric measure, and further these coordinates are read as the measuring points. The coordinates of the two corners of the box are obtained and stored along with the radiation image and it is well known to one skilled in the art that the coordinates are a measuremnt of the rectangle. Further, the size of the rectangle can be set by the user, as shown by the prior art of ITDB (IBM technical disclosure bulletin), which was pointed out by the examiner in the office action. If the size of the rectangle is set to the circumference of the object in question in the image then the dimensions of the object will be known since the coordinates/measurrements of the rectangle are known/calculated by the computer. Further, applicant argues that the prior art of Wang (U.S. patent 4,598,369) teaches away from the prior art of ITDB since the prior art of Wang is directed to global imaging. Examiner disagrees. Both the prior art of ITDB and Wang et al. are directed to medical radiation images and image processing so therefore examiner believes that they are combinable since they are analogous in medical image processing...
